GROUPWARE FOR PASSENGER SERVICES

AERIAM's solution enable the logs loaded into the database or user requests for information to be made from any computer terminal connected to the network, either wire- or wirelessly.

An Activity Log is essential for optimising the management of Passenger Service activities as well as reliably keeping Airport Authorities informed of them. This Log should take the form of a centralised information resource to be shared by Passenger Service personnel.

AERIAM, offers an IT solution which, based on Airport Information Systems, makes it possible to:

Need for a support tool

→ **Compile all the logs generated** by Passenger Services in the scope of their work, in a centralised Database, so that they can be subsequently referred to and analysed. (*Activity Log*)

→ Centralise **groupware**, allowing users to share information (**consult, publish documents and add information lists** easily, instantaneously and efficiently) and **consult and publish interesting news**. (Groupware and Information INTRANET)

Estado	Fecha	Hora	Salida	Substitución	AV	Operación
Entradas en salas sin terminales:						
Alarcon	12/12/2004	12:10	Salida	Málaga aereop	2	0
Alarcon	12/12/2004	12:11	Salida	Columbus de Tenerife 4	2	0
Alarcon	12/12/2004	12:11	Salida	Sevilla	2	0
Alarcon	12/12/2004	12:11	Salida	12 184-Los Reyes de España	2	0
Entradas/salidas en salas terminales:						
Alarcon	12/12/2004	12:10	Salida	Málaga aereop	2	0
Alarcon	12/12/2004	12:11	Salida	Sevilla	2	0
Alarcon	12/12/2004	12:11	Salida	Málaga aereop	2	0
